

Billy Robbins
Hooked On Safety, "My World"

LENGTH: 18 MINUTES

PRODUCTION YEAR: 2007

PROGRAM SYNOPSIS:

Do your employees believe an accident-free workplace is a possibility? Let Billy Robbins convince them that it is absolutely possible if they are highly motivated, committed and have a vision for it. In this unique, fast-paced presentation, one of the top motivational speakers in the safety field shows viewers how changed attitudes produce safety. Billy's blend of humor, audience participation and the story of his own incident drive home the point that accidents don't just affect your life, but also the lives of everyone around you.

PROGRAM OBJECTIVES: Use this dynamic program to achieve the following objectives:

- Create a positive safety attitude in your employees;
- Convince everyone to take responsibility for his or her own safety;
- Create an environment that makes your safe work practices easier to implement and maintain;
- Encourage a fresh new commitment to safety from all your employees.

INSTRUCTIONAL CONTENT:

THE POSSIBILITY OF AN ACCIDENT-FREE WORKPLACE

- Billy has visited many workplaces that have been accident-free workplaces: manufacturing plants, nuclear weapons facilities, submarine building plants, etc.
- These workplaces have not had an incident, an accident, a recordable, whatever term you want to give it, in years because they've figured out that an accident-free workplace can exist.
- Billy says what he wants the audience of his presentation to do is figure it out too, because "I don't understand why anyone else, or anyone at all, would want to work anywhere other than an accident-free workplace."
- People have excuses in the way they think, the way they believe things. So what Billy wants attendees to do is to change the way they think.
- One of the first things you've got to do is change your attitude. If you don't believe something exists or something is possible, you won't even try to go there.
- If you don't believe an accident-free workplace is possible, you won't even try to get there. It is possible; however, Billy's been there and he says none of it's hard.

EXCUSES PREVENT ACCIDENT-FREE WORKPLACES

- We've all got excuses; some of them are pretty good, but you know "excuses are kind of like belly buttons—everybody has one."
- Billy makes the distinction between dangerous and hazardous jobs. When somebody takes a shortcut or gets in a hurry, instantly you're changing someone's hazardous job into a dangerous job.
- He hears people say all the time, "That's why we can't have an accident-free workplace; we've got dangerous jobs." Billy says that's only an excuse.
- "But Billy, you don't know what I do for a living. You don't know what kind of equipment, what kind of machinery, what kind of tools I have to work with." Billy says that doesn't even enter into the factor because he's never seen a tool or piece of equipment or machinery that knows your name, has a grudge against you or carries a personal vendetta against you "that wants to reach out and grab you, pull you in, chew you up, spit you out."
- Those types of tools and machinery don't exist, according to Billy, until somebody gets in a hurry or takes a shortcut. That's when you're giving the tool or equipment permission to do anything it wants to you; that's when it will get personal.
- That's when it will grab you, pull you in, spit you up, chew you up and spit you out. Until that time, it doesn't even enter into the factor; it's just an excuse, Billy says.

CHANGING YOUR ATTITUDE

- Billy tells the audience that you can't get to an accident-free workplace overnight, but that they can get there. They aren't too far away, so he asks why they don't go all the way.
- "Is it a possibility? Absolutely, but one of the very first things you've got to do is change your attitude; you've got to believe it exists; you got to believe it's possible," he says.
- Billy believes a changed attitude produces safety. The same changed attitude also produces success. Safety and success go hand in hand and employees should want to be successful at work.

KENNY SUFFERS AN ACCIDENT

- Billy says that his presentations get better results when someone in the audience suffers an accident. He chooses Kenny, who has socks put on his hands to simulate some of the traits of a quadriplegic.
- The attendees are told that Kenny was driving to work and was hit from behind by another driver. He is now a quadriplegic and just lost all bodily functions from the neck down, even though he didn't do anything wrong to cause the accident.
- Kenny then has his body taped to his chair so he can get the full impact of his accident. "That's what accidents do; they change people's lives," says Billy.

ACCIDENTS CHANGE PEOPLE'S LIVES

- Billy asks Kenny what his wife's and daughter's names are. He responds Charmain and Laura. "Laura's life just got changed and your lives just got changed. That's just what happened here and we don't stop to think about that. That's why we want you to have an accident-free workplace, because accidents change people's lives," Billy says.
- "We want you (Kenny) to be highly motivated this morning. See, his life has just been changed. He cannot do all those things he used to be able to do 10 minutes ago," Billy notes.
- That's what accidents do; they change people's lives, but not just Kenny's life. His wife's life and his kid's life have also been changed.

ATTRACTING ATTENTION

- Billy tells Kenny that if he's going to live in his world, he's going to attract a lot of attention. Billy says he can go to any restaurant and before he gets to the table, every eye in the restaurant is on him. They watch you and like to stare, but don't want you to know they're looking.
- Billy gives a couple of examples of how children will see him when he's out and ask him what happened. While their parents try to keep them from asking Billy or making comments, the adults' and their children's lives have already been changed.
- "You're going to impact everyone you come into contact with from this moment on and they don't know what to think about you; they don't know how to perceive you. They treat you different, even though you're not really different," says Billy.
- Billy says he's approached people and put out his hook to shake hands and people will put their hands in their pockets, turn around and walk off, give a two-pinky shake, etc. "They don't know what to think. Everything's different now."

COMPLACENCY

- Billy asks the audience who's more prone to have the first accident, employees of fifteen years or better or the "new people coming in that don't know squat?" Old people, he says, because of complacency.
- Old guys have been doing their jobs for so long they know every shortcut there is, notes Billy. "You know how to get around every procedure that's ever been written; you know how to get around every practice that's ever been put in place."
- "You've been doing it so long and getting away with it that you think your luck is going to run forever, but it won't. Eventually, your luck will run out and somebody will pay," says Billy.
- The young guys come in and see all the equipment and machinery and think they need to be careful or get hurt, while the old guys get them on the line and tell them to do their jobs "their way" because it's faster and more productive.
- "After all, the company, you know they don't really mean that safety stuff," Billy continues on. "They got to say that." He says this kind of talk from old employees corrupts the new ones and creates a never-ending cycle.
- "Incident after incident until eventually, wham, somebody messes up. And if you're going to have an accident-free workplace that's got to stop," Billy says.
- Everybody from the very top to very bottom has got to do everything they've been trained to do 100 percent of the time and 100 percent correctly, according to Billy. "When you do that, you eliminate hazards. When you eliminate hazards, you eliminate accidents."
- "Is it worth it?" asks Billy. "Well, yeah. You don't want to come in my world, do you? It changes everything. It changes everything."

BILLY'S ACCIDENT

- On December 8, 1980, Billy got up to go to work just like everyone else gets up to go to work every morning. He says his attitude toward safety wasn't much different from everyone else's.
- He didn't think anything would be any different than it was the day before. He got his assignments, got in his truck and headed out to the job site. "I'm up there doing everything I'm supposed to do, but somebody else took a shortcut...Every dream, every desire, every plan I had for my life was instantly changed. And I did nothing wrong, absolutely nothing," says Billy.
- While on the pole, Billy was struck with 7,200 volts of electricity. It wasn't his fault; he did nothing wrong. He performed all required tests, had on all his PPE and did everything he was supposed to do, but somebody got in a hurry.
- "They took a shortcut and instantly they changed my hazardous job to a dangerous job. And it changed my life. And that's what accidents do, you see," Billy says.
- When Billy came to, he thought he had dozed off while working and had slid halfway down the pole. He knew he was hurt, but didn't know how bad.
- When he reached for his telephone, he began to realize what had happened. He worked for the telephone company, but knew somebody must have taken a shortcut and left a power line on the pole.
- Billy noticed that his finger was gone and he could smell the odor of his own burning flesh. He was overcome with fear that he if he moved, he might come into contact with whatever had electrocuted him.
- He began to scream and finally got a postman's attention. The postman then ran from house to house to get help. He finally found someone home and called for help.
- When the rescue personnel arrived, they couldn't get Billy down immediately. Because they had to get permission from the homeowners in the area to move equipment in and remove some trees to get to him, Billy was left hanging on the pole another hour.

BILLY ISN'T EXPECTED TO LIVE

- When the EMT's got Billy onto a stretcher and into an ambulance, he began to feel better until he heard them talking on the ambulance radio.
- The EMT's told headquarters they needed a helicopter; they couldn't even tell how bad he was hurt as power had gone through his whole body. Headquarters responded the weather was too bad and they'd have to drive him 72 miles to the burn center.
- "He's going to die," responded an EMT. "They gave me no hope," Billy says. They threw him in the ambulance and took off, fully expecting him to die.
- When Billy's parents arrived at the hospital, he could hear the medical personnel talking to them out in the hallway. "We just don't think your son is going to make it; he's hurt too bad. We can't even determine the extent of his injuries," a physician said.

CONSEQUENCES OF A SEVERE INJURY

- Billy says after the accident, the doctors tried to use elastic traction bands to straighten his tendons. One day, when his mother visited, he must have moved the wrong way and one of his fingers was pulled off and "it's just bouncing around like that on that old band."
- His mother screamed and passed out, hitting her head on the bed. She had to be taken down to the emergency to attend to the gash on her head.
- No matter what your background is, what color you are, what your education is, how mean you think you are, it makes no difference; a severe injury changes everything. "And not just for you; it affects everyone you know, everyone you care about," says Billy.

MOST ACCIDENT VICTIMS WON'T SURVIVE

- Billy says 99 percent of people who experience an accident like his won't survive. "I laid in the burn center for three days and I watched 12 people around me die. I was the only one that got out."
- The macho thing kicks in and 99 percent of male victims won't make it, while female victims can survive.
- Billy uses an example of another patient at the burn center to make his point. A 19-year-old who worked for a roofing company had slipped off a ladder and a bucket of hot tar landed on his head, severely burning his face.
- He lay in the hospital and begged the doctors to let him die, as "that macho thing kicked in." Billy told him, "Come on, man, we're going to make it," but the young man gave up and died.
- Billy also had a friend who had an accident similar to Billy's and afterward moved in with his mother. Billy told him that he couldn't live with his mother forever and offered to help him get his life back.
- His friend's family did everything for him, fed him, clothed him, etc. "But you can't live with Mama forever. And he didn't live with Mama forever. Here, several years ago, they found him hung out in the barn," Billy says.
- "That macho thing kicks in! I know guys that have made it 10 years, 12 years, 14 years before they quit. And they gave up. And they didn't die physically; they died mentally first. And then they died physically, normally at their own hand," concludes Billy.

AN ACCIDENT AFFECTS EVERYONE AROUND YOU

- "So, when you decide to take that shortcut, when you decide to do something you're not supposed to do, you're not just making that choice for you. You're making the choice for your wife, your kids," he adds.
- Billy then tells the story about his dad and how the first time he saw him cry was after his accident. They lived on a ranch and he and his dad would drink coffee together in the mornings.
- "I walked in there one morning and he had socks up on his hands like this, where you have stumps you know. He's got this big old Styrofoam cup of hot coffee, and he's sitting there at the table trying to pick up this cup. Just to figure out how I was going drink. We didn't know what my life was going be like," says Billy.
- "He's sitting there trying to get that cup up, pouring hot coffee down his chest; big old crocodile tears running down his cheeks. It changes everything," Bill notes. "That's why safety has got to become the most important thing in your life, because your safety affects the most important people in your life."

SOMEBODY PAYS FOR EVERY ACCIDENT

- You are responsible for your own safety, not the company, the union or the government, according to Billy. "If you get everybody doing everything you've been trained to do 100 percent of the time, 100 percent correctly, it's not going to be long until you have that accident-free workplace. Because, you ever stop to think • Even though his kids "weren't even a thought" when he got hurt, they pay for his accident every day, says Billy. He's never been able to pick his babies up, throw them in the air and catch them like other people have nor has he been able to teach them certain things.
- While his life is great, Billy says, "This is what accidents do: they steal the most important things in your life and never give them back. That's why we want you accident-free."
- "It's not about the bottom line; it's not about the money; it's not about the production; that's not why we're here today. It's about them (your family) and it's about you," concludes Billy.
